V. ANNEX A:

States With Abortion Bans Entering Into Effect After Dobbs (as of 01/09/2023)
I. EXECUTIVE SUMMARY

Following the United States (US) Supreme Court decision in *Dobbs v. Jackson Women’s Health Organization* in June 2022, people residing in the US who can become pregnant are facing a human rights crisis. This urgent appeal to United Nations (UN) mandate holders, supported by a coalition of 196 signatories, details these intensifying harms, discusses the ways in which *Dobbs* contravenes the US’ international obligations, and sets forth calls to action.

With the *Dobbs* decision, the US Supreme Court overturned the constitutionally protected right to access abortion, leaving the question of whether and how to regulate abortion to individual states. Approximately 22 million women and girls of reproductive age in the US now live in states where abortion access is heavily restricted, and often totally inaccessible.

The harms of the *Dobbs* decision detailed in this appeal include: the impact on women’s lives and health; the penalization of healthcare, including criminalization; threats to privacy from increased digital surveillance; infringement on freedom of thought, conscience and religion or belief; and the disproportionate impact on marginalized populations.

By overturning the established constitutional protection for access to abortion and through the passage of state laws, the US is in violation of its obligations under international human rights law, codified in a number of human rights treaties to which it is a party or a signatory. These human rights obligations include, but are not limited to, the rights to: life; health; privacy; liberty and security of person; to be free from torture and other cruel, inhuman, or degrading treatment or punishment; freedom of thought, conscience, and religion or belief; equality and non-discrimination; and to seek, receive, and impart information.

The signatories call on the UN mandate holders to take up their calls to action, which include communicating with the US regarding the human rights violations, requesting a visit to the US, convening a virtual stakeholder meeting with US civil society, calls for the US to comply with its obligations under international law, and calls for private companies to take a number of actions to protect reproductive rights.
March 2, 2023

Re: Urgent Appeal: Human rights crisis following the United States Supreme Court decision in Dobbs v. Jackson Women’s Health Org.

Dear Experts,

On behalf of the Global Justice Center (GJC), Pregnancy Justice (formerly National Advocates for Pregnant Women), National Birth Equity Collaborative (NBEC), Amnesty International USA (AIUSA), Human Rights Watch (HRW), Physicians for Human Rights (PHR), and other signatories, together with the support of the law firm Foley Hoag LLP, we write to call your attention to the intensifying harm that people residing in the United States who can become pregnant currently face following the US Supreme Court decision in Dobbs v. Jackson Women’s Health Organization (Dobbs, or Dobbs v. JWHO). This submission is supported by a coalition of organizations and experts promoting civil rights, human rights, women’s rights, children’s rights, gender equality, racial justice, religious freedom, economic justice, and the right to access to healthcare.

Before detailing the devastating human rights implications of Dobbs, we recognize, with deep appreciation, the work that many of you have already undertaken to highlight the crisis facing people in the US who can become pregnant. Such efforts, including, but not limited to, an amicus brief in the Dobbs case, joint statements in the wake of the decision, and pre-Dobbs communications to the State regarding the decimation of abortion access in certain parts of the country, have been important in highlighting the State’s failure to uphold its human rights

---

1 While the remainder of this letter often refers to women and girls as the targets of laws restricting abortion, we recognize that although most people who can become pregnant and require abortion services are cisgender women, people with diverse gender identities are also affected and need abortions. For more information on the need for abortion services amongst trans, non-binary and gender diverse people in the United States, see H. Moseson et al., Abortion experiences and preferences of transgender, nonbinary, and gender-expansive people in the United States, 224 AM. J. OBSTETRICS & GYNECOLOGY 4 (2021); American College of Obstetricians and Gynecologists, ACOG Committee Opinion: Health Care for Transgender and Gender Diverse Individuals, 137 OBSTETRICS & GYNECOLOGY 3, p. e80-e81 (Mar. 2021), https://www.acog.org/-/media/project/acog/acogorg/clinical/files/committee-opinion/articles/2021/03/health-care-for-transgender-and-gender-diverse-individuals.pdf.

3 The coalition of organizations and experts appear as signatories at the end of this letter.

6 Working Group on the issue of discrimination against women in law and practice, Special Rapporteur on the right of everyone to the enjoyment of the highest attainable standard of physical and mental health; and the Special
obligations. Eight months on from this catastrophic legal decision, it is now apparent that the consequences are even worse than feared. Women and girls in need of reproductive healthcare are being met with systematic refusals, huge financial burdens, stigma, fear of violence, and threats of criminalization. Thousands are being forced to remain pregnant against their will. We urge you to raise these issues directly with the State in line with your mandates and to mobilize your constituencies to address this human rights crisis.

Part II of this submission outlines the consequences of Dobbs on the fundamental human rights of women and girls, as well as the outsized impact it has on certain demographics made vulnerable by systemic oppressions. This factual summary includes input from physicians in various states as part of fact-gathering efforts conducted by a number of organizations involved in this submission. Part III discusses the ways in which Dobbs contravenes the US’ international obligations.

II. Summary of the Facts

1. In June 2022, the US Supreme Court overturned the constitutionally protected right to access abortion, leaving the question of whether and how to regulate abortion to individual states. As of January 17, 2023, abortion is banned, with extremely limited exceptions, in thirteen states: Alabama, Arkansas, Idaho, Kentucky, Louisiana, Mississippi, Missouri, Oklahoma, South Dakota, Tennessee, Texas, West Virginia, Wisconsin, and Oklahoma. Georgia has banned abortion after six weeks of pregnancy (effectively outlawing access entirely). Approximately 22 million women and girls of reproductive age (ages 15-49) in the US live in

7 Dobbs v. JWHO.
8 Id., p. 2243.
9 Some states, such as Indiana and Ohio, have enacted bans that are currently under injunction as litigation moves forward. See “After Roe Fell: Abortion Laws By State,” Center for Reproductive Rights (updated in real time), https://reproductiverights.org/maps/abortion-laws-by-state/. In the November 2022 election, Kentucky voters rejected a ballot initiative to specify that the state constitution does not protect the right to abortion; however, the impact of the initiative is not yet clear, and Kentucky’s trigger ban is still in place. See A. Rickert, “Kentucky voters reject amendment that would have affirmed no right to abortion,” NPR (9 Nov. 2022), https://www.npr.org/2022/11/09/1134835022/kentucky-abortion-amendment-midterms-results. Other state bans have been blocked by courts: Arizona, North Dakota, Utah, and Wyoming. “Tracking the States Where Abortion is Now Banned,” The New York Times (updated 6 Jan. 2023), https://www.nytimes.com/interactive/2022/us/abortion-laws-roe-v-wade.html.
states where abortion access is heavily restricted, and often totally inaccessible.\textsuperscript{11} Four states have begun restricting access to medication abortions, including by prohibiting the mailing of medication into their jurisdictions.\textsuperscript{12} Meanwhile, at least three states (Texas, Oklahoma, and Idaho) enacted so-called “bounty” laws before the \textit{Dobbs} decision, empowering private citizens to sue providers who carry out abortions.\textsuperscript{13} In continuation of the country’s devaluation of the lives of Black and Brown women, communities of color and of lower socio-economic status are bearing the brunt of these laws.\textsuperscript{14} Dozens of clinics have closed across the country since \textit{Dobbs} was decided,\textsuperscript{15} increasing travel time and distance for women seeking care — and barring access for those women unable to travel.\textsuperscript{16}

\textbf{A. Women’s Lives and Health on the Line}

2. The onslaught of legislative abortion restrictions in the US denies women’s decisional and bodily autonomy in a way that rejects the agency, dignity, and equality of people who can become pregnant.\textsuperscript{17} This draconian attack on gender equality threatens women’s lives and health on a massive scale.

3. In the months since \textit{Dobbs}, two of the organizations involved in this submission have interviewed US healthcare practitioners about the impacts of anti-abortion legislation on patients.\textsuperscript{18}

\textsuperscript{13} Okla. Stat. tit. 63, §1-745.33-.34, .38 (2022); Idaho Code §§ 18-8804, 18-8807; Texas Heartbeat Act, Senate Bill 8 (SB 8) (20 Mar. 2021). See also S. Murphy, “Oklahoma Governor Signs the Nation’s Strictest Abortion Ban,” \textit{AP News} (25 May 2022), https://apnews.com/article/abortion-us-supreme-court-health-texas-oklahoma-ad37e8db8a0f3fd9f4fcd215f8a3ed0a. These laws are still in effect post-\textit{Dobbs}.

\textsuperscript{17} For more on the autonomy, dignity and equality impacts of abortion restrictions, see CEDAW Committee, Inquiry concerning the U.K. and Northern Ireland under article 8 of the Optional Protocol to CEDAW (U.N. Doc. CEDAW/C/OP.8/GBR/1, 17) (6 Mar. 2018) (“criminalization has a stigmatizing impact on women and deprives them of their privacy, self-determination and autonomy of decision, offending women’s equal status, constituting discrimination.”). See also Working Group on the issue of discrimination against women in law and in practice, Women’s Autonomy, Equality and Reproductive Health in International Human Rights: Between Recognition, Backlash and Regressive Trends (Oct. 2017) (“both the CEDAW Committee and the WGDAW determined that the right to safe termination of pregnancy is an equality right for women.”).
women’s healthcare. The practitioners’ responses describe far-reaching implications for women and girls seeking abortion and other reproductive healthcare, dramatically affecting their health, and resulting in serious — sometimes fatal — risks.

4. These interviews and documentation by women’s rights groups describe difficulty, including:
   - in accessing abortion in cases of miscarriage;
   - forced travel across state lines in emergencies;
   - denial of care in cases of ectopic pregnancy;
   - hospitals delaying care until the woman’s health has deteriorated to a level most certainly to fit within narrow and vague “risk to life of the mother” exceptions;
   - professionals withholding information fearing that their advice could violate anti-abortion laws;
   - reduced access to non-reproductive healthcare (e.g. chemotherapy);
   - the infliction of serious psychological harm on women and girls forced to carry an unwanted pregnancy;
   - complications for adolescents forced to give birth;
   - reduced access to other forms of reproductive healthcare including contraception;
   - heightened risk of violence faced by pregnant individuals in abusive relationships; and
   - pregnant individuals forgoing prenatal care to avoid surveillance.

5. Anti-abortion legislation may also reduce access to reproductive healthcare in states where abortion is still legal, as patients are displaced from restrictive jurisdictions into already-overburdened clinics in jurisdictions where abortion remains legal.

6. The accounts provided by the interviewed professionals are shocking. Dr. Lisa Harris, Professor of Obstetrics and Gynecology at University of Michigan Medical School, described how a patient treated at her institution for ectopic pregnancy — a life-threatening condition in which an embryo implants outside of the uterus and therefore cannot result in a healthy pregnancy and requires an abortion — had to travel from her home state, Ohio, to Michigan because she could not find a doctor willing to treat her in Ohio after their six-week abortion ban came into effect in June 2022. More broadly, Dr. Harris commented that, in the six months between the overturn of Roe v. Wade (Roe) and the passage of Michigan’s constitutional amendment protecting abortion access, some faculty and trainees with whom

---

18 Foley Hoag LLP, legal counsel to the Global Justice Center, interviewed medical professionals, including three OB/GYNs (Drs. Harris, Serapio, and Drey), as well as a researcher who studies the impact of abortion on women (Dr. Foster). The methodology for these interviews included providing each interviewee with background on the purpose of the submission to the Mandate Holders and then asking about their general views about the change in laws as experienced by them, and their experience (before and after the change) performing abortions, treating patients who sought abortions, or otherwise treating patients. PHR engaged in a series of discussions with various medical sector stakeholders and clinicians post-Dobbs to understand the scope and nature of impacts of the decision on clinicians in the U.S., including specifically medical students through PHR’s Student Advisory Board.

19 Interview by Foley Hoag LLP with Dr. Lisa Harris (4 Nov. 2022).

20 Roe v. Wade, 410 U.S. 113, 153 (1973) (recognizing “the right of the woman to choose to have an abortion before viability”).
she works decided not to provide abortion care because of the potential risk of prosecution should Michigan’s 1931 abortion ban come into effect.21

7. Dr. Elissa Serapio, an obstetrics and gynecology specialist (or OB-GYN, a doctor who specializes in pregnancy and female reproductive health), worked in Texas in the aftermath of the state’s six-week abortion ban in 2021. Dr. Serapio explained that her colleagues were forced to watch their patients’ health deteriorate before providing abortions due to the narrow exceptions for legal abortion where the “life of the mother” is at risk.22 This challenge, Dr. Serapio noted, applied even when there was a zero percent chance that the pregnancy in question could result in a live birth.23

8. Dr. Eleanor Drey, Medical Director of the Women’s Options Center and the Family Birth Center at San Francisco General Hospital, explained that physicians in states with abortion bans are now faced with two bad options: leave their patients to suffer harm or else risk prosecution.24

9. While the array of state level abortion bans ostensibly have “exceptions” to safeguard the life and/or health of the pregnant person, these exceptions are unworkable. Replete with vague and non-medical terminology, the “exceptions” to protect women’s health and lives may be difficult to implement in practice, because their terms do not necessarily correspond with medical diagnoses and sometimes exclude health-threatening conditions.25 Medical professionals report that the restrictive legal landscape means that they are generally unsure whether and when medically necessary, and even lifesaving, abortions are legal. They note that such uncertainty causes both healthcare providers and institutions to delay or deny abortion and other reproductive healthcare.26 These dangerous chilling effects were foreseeable: research from other countries has long demonstrated the chronic unworkability, and concurrent danger, of general abortion prohibitions with exceptions to “save the life of the mother” or for “medical emergencies only.”27

21 Id. Dr. Harris also reported that many colleagues only feel comfortable providing abortion care in hospital settings, rather than clinics where abortion care is normally provided because they perceive the risk of prosecution to be lower in hospitals than in an outpatient setting. See Mich. Const. art. 1, § 28 (recognizing a fundamental individual right to reproductive freedom, including abortion care, adopted by ballot initiative Nov. 2022).

22 Interview by Foley Hoag LLP with Dr. Elissa Serapio (29 July 2022).

23 Id.

24 Interview by Foley Hoag LLP with Dr. Eleanor Drey (15 July 2022).

25 See e.g., E. Woodruff, “Louisiana hospital denies abortion for fetus without a skull” (17 Aug. 2022), https://www.nola.com/news/healthcare_hospitals/article_d08b59fe-1e39-11ed-a669-a3570eed885.html. A Louisiana woman was denied an abortion in by a hospital after her fetus was diagnosed with acrania – developing without a skull – a condition considered “uniformly fatal in the perinatal period.” Because acrania did not appear on a state list of conditions considered to render a fetus “medically futile,” Louisiana doctors declined to perform the abortion, despite the physical and psychological health risks of continuing a pregnancy that will end in stillbirth or death within hours of birth.

27 For example, in the Dominican Republic, where abortion is criminalized, “[m]edical providers said that criminal penalties for abortion made it difficult for them to exercise their best judgment and provide the best standard of care
10. Several women who have been denied care in this way have bravely shared their experiences publicly. In July 2022, a woman had to travel hundreds of miles to a different state for a lifesaving abortion. Though she was experiencing an ectopic pregnancy (one of the leading causes of maternal mortality in the first 12 weeks of pregnancy) her doctor would not end the pregnancy because he was “worried that the presence of a fetal heartbeat meant treating her might run afoul of new restrictions on abortion.”

11. In Wisconsin, hospital staff would not remove the fetal tissue for a patient with an incomplete miscarriage for fear that it would violate that state’s abortion ban. She was left to bleed at home for more than 10 days. While the patient survived and expelled the tissue safely, delays in miscarriage care — now common in anti-abortion states — pose serious risks to women’s health. Delays in expelling tissue following miscarriage can lead to hemorrhaging and life-threatening sepsis, and can potentially impact future fertility. Delayed care can also cause serious psychological suffering and trauma for women and families already dealing with pregnancy loss.

30 Id.

31 Id.

33 See generally A. Redinger & H. Nguyen, Incomplete Abortions, STATP forwards [INTERNET] (27 June 2022), https://www.ncbi.nlm.nih.gov/books/NBK559071/ (describing “complications that can arise after the management of incomplete abortion including death, uterine rupture, uterine perforation, subsequent hysterectomy, multisystem organ failure, pelvic infection, cervical damage, vomiting, diarrhea, infertility, and/or psychological effects.”).

12. Such harrowing experiences are the tip of the iceberg. The chilling effect of anti-abortion restrictions is now systemic. Even where physicians determine that an abortion is necessary and are willing to stipulate that the patient’s condition falls under a medical exception to a state’s ban, those physicians often still face difficulty assembling the necessary medical team to carry out the procedure due to reluctance from other staff or suppliers of medication, as well as state regulations requiring multiple physicians to attest to the legal compliance of any abortions performed. As Dr. Serapio explained, even if a physician determines that an abortion is medically necessary, the other healthcare professionals involved may still object given the confusion surrounding legality and the resultant environment of fear.

13. Moreover, risk-averse hospitals often fail to give healthcare teams the information they need to feel comfortable making such a medical decision. In Dr. Serapio’s experience, hospitals leave medical teams to make these decisions — and assume the risk that goes with them — alone.

14. The chilling effect of anti-abortion legislation may also cause physicians to withhold information from patients for fear that their medical advice could violate their state’s anti-abortion statutes. Doctors report that the rapidly shifting landscape has impacted their ability to counsel patients, including full information on dealing with pregnancy complications and options for patients from across state lines: “We’re trying to be very, very careful,” said Dr. Katie McHugh, in an interview with National Public Radio (NPR), “And it is so scary to me to know that I’m not only worrying about my patients' medical safety, which I always worry about, but now I am worrying about their legal safety, my own legal safety. The criminalization of both patients and providers is incredibly disruptive to just normal patient care.”

15. Dr. Jennifer Griggs, a Professor in the University of Michigan’s Department of Internal Medicine, Hematology & Oncology Division, also spoke to the impact of abortion restrictions on women’s access to healthcare more broadly — even non-reproductive care. She described how the legal landscape post-Dobbs leaves pregnant people and their clinicians in an untenable situation, risking the life of a pregnant patient by delaying treatment for a range of health conditions. For example, she reported that anti-abortion laws challenge doctors’ ability to provide cancer treatment in a timely manner. Because treatments such as...

35 See e.g., Fla. Stat. § 390.0111 (1)(a) (requiring for any abortion after 15 weeks gestational age that “Two physicians certify in writing that, in reasonable medical judgment, the termination of the pregnancy is necessary to save the pregnant woman’s life or avert a serious risk of substantial and irreversible physical impairment of a major bodily function of the pregnant woman other than a psychological condition.”)
36 Interview by Foley Hoag LLP with Dr. Elissa Serapio (29 July 2022).

41 Id.
chemotherapy and radiation can harm a fetus, particularly during early pregnancy, laws that restrict women’s termination options can force them to delay cancer treatments until later in pregnancy when the risks are lowered or until they have given birth. Such delays, however, can put the patient’s life at risk.\(^{42}\) The uncertainty of the law under state abortion bans also has what Dr. Harris refers to as a “coercive negative impact on patients,” in which concerns about restrictive or uncertain abortion regulations lead doctors or patients to make suboptimal decisions about a patient’s course of treatment.\(^{43}\)

16. **Girls and adolescents** are at increased risk of life-threatening consequences owing to delayed reproductive healthcare. Because girls and adolescents experience serious pregnancy-related complications at a higher rate than adults,\(^ {44}\) including, trauma to organs,\(^ {45}\) pregnant adolescents are particularly at risk when healthcare providers delay care. Despite this heightened vulnerability, none of the state abortion bans recognize an exception specifically for adolescent pregnancy.\(^ {46}\) Even before *Dobbs*, young people under 18 in at least 36 states faced “parental involvement” requirements forcing them to notify and/or seek permission from a parent to get an abortion. These restrictions remain in place in more than 20 states where abortion is still legal.\(^ {47}\) While most young people who have abortions voluntarily involve at least one parent in their decision, forced parental involvement laws put young people’s health and safety at risk. Young people without a supportive parent to involve in their abortion decision — for example, those who “fear physical or emotional abuse, being kicked out of the home, alienation from their families or other deterioration of family relationships or being forced to continue a pregnancy against their will”\(^ {48}\) — generally have the option to go through a judicial bypass process to request permission from a judge to access abortion care. However, the process for securing a bypass is daunting and unworkable for many young people.\(^ {49}\) A recent study by Human Rights Watch revealed that Florida judges denied more

\(^{42}\) Id.

\(^{43}\) Interview by Foley Hoag LLP with Dr. Lisa Harris (4 Nov. 2022). Dr. Harris described a patient pregnant with twins who experienced a complication requiring the termination of one fetus for the other to survive. This procedure should normally be completed after a certain stage of pregnancy to minimize the chance of complications or death. However, due to concerns over the shifting legal landscape, the patient elected to have the procedure earlier than medically advised. This decision — prompted by abortion bans and legal uncertainty — placed the health of the mother and the remaining fetus at risk.

\(^{46}\) See supra note 9.

\(^{48}\) In some states with parental notification requirements, there are provisions for judicial bypass of the requirement; however, the process for securing a bypass is daunting and unworkable for many girls and adolescents, requiring them to demonstrate that they are “1) sufficiently mature and well enough informed to make an abortion decision without parental involvement, and/or that 2) parental involvement is not in their best interests.” Perversely, these requirements can result in a judicial finding that a minor is “not sufficiently mature” to make an informed abortion decision, therefore forcing the child to remain pregnant and give birth. See, e.g., Human Rights Watch, “The Only People It Really Affects Are the People It Hurts” (11 Mar. 2021), https://www.hrw.org/report/2021/03/11/only-people-it-really-affects-are-people-it-hurts/human-rights-consequences.

\(^{49}\) Id. In most states, to obtain a judicial waiver, young people must demonstrate that they have sufficient maturity to have an abortion without parental involvement, or that parental involvement is not in their best interest. Perversely,
than one in eight young people's petitions in 2020-2021.\textsuperscript{50} These children and adolescents were then forced to continue a pregnancy against their wishes, travel outside the state, or seek a way to manage abortion outside the health system.

17. Abortion bans also harm women’s health in ways unrelated to pregnancy complications. Abortion restrictions can increase the risk of violence for pregnant individuals who are exposed to abusive relationships. Studies reveal that many victims of intimate partner or domestic violence seek abortions to prevent further abuse.\textsuperscript{51} The inability to obtain an abortion can force victims to remain with their abusers.\textsuperscript{52} These impacts are compounded for women from marginalized groups, who are more likely to experience domestic violence\textsuperscript{53} and are less likely to have access to an abortion if the procedure has been banned in their state.

18. Abortion bans can also increase the risk of suicide. Medical exceptions to abortion bans in the US do not provide for psychological risks to life or health.\textsuperscript{54} This limitation prevents physicians from providing abortion care even if they have a well-founded fear that their patient will attempt suicide if forced to continue their pregnancy.\textsuperscript{55} Federal guidance regarding the provision of emergency medical care does not explicitly mention mental health under emergency medical conditions that may require abortion.\textsuperscript{56} In Dr. Drey’s experience, suicide risk is especially pronounced in some of her teenage patients who develop “post-traumatic stress disorder or suicidal ideation as a result of their pregnancies and make plans to commit

\textsuperscript{51} S. Roberts et al., Risk of violence from the man involved in the pregnancy after receiving or being denied an abortion, 12 CENT BMC MEDICINE 144 (2014) (explaining that women denied an abortion remain tethered to abusive partners and at risk for continued violence, even if they leave the relationship).

\textsuperscript{52} Id.

\textsuperscript{54} Of the statutes banning abortion in the US, none include exceptions to protect a pregnant person’s mental health. Some specifically exclude physical harms related to psychological distress. For example, Idaho’s law explicitly states that “No abortion shall be deemed necessary to prevent the death of the pregnant woman because the physician believes that the woman may or will take action to harm herself” (Idaho Code § 18-622(1)(a)).

\textsuperscript{55} Interview by Foley Hoag LLP with Dr. Eleanor Drey (15 July 2022).

suicide if they cannot obtain an abortion.” For individuals who have become pregnant as a result of rape, this risk can also be heightened, Dr. Drey explained.

19. Even more starkly, pregnant people who attempt suicide can be charged with attempted feticide, manslaughter, or murder in some states. For example, in 2011 in Indiana, Bei Bei Shuai, an immigrant woman from China, attempted suicide and was subsequently charged with murder and feticide for attempting suicide while pregnant, based on the prosecutor’s interpretation of the murder code to include fetuses. As the zeal for prosecuting pregnant individuals increases, there is a significant risk that abortion bans with fetal personhood language can use a pregnant person’s need for mental health support as a reason to funnel them into the criminal-legal system whilst simultaneously failing to address the underlying health issue.

20. Abortion bans also reduce the quality and availability of other forms of necessary reproductive healthcare, such as contraception, pre- and postnatal care, and preventative annual exams. One reason for this is that the reproductive healthcare clinics that provide this

---

57 Interview by Foley Hoag LLP with Dr. Eleanor Drey (15 July 2022). Dr. Drey reported treating a pediatric patient whose pregnancy was caused by rape, who experienced post-traumatic stress disorder symptoms every time the fetus moved and was at risk of suicide as a result.

61 See R. Baldwin III, “Losing a pregnancy could land you in jail in post-Roe America,” NPR (3 July 2022), https://www.npr.org/2022/07/03/1109015302-abortion-prosecuting-pregnancy-loss (stating that the number of cases where pregnancy or pregnancy loss was used in a criminal investigation or prosecution nearly quadrupled from 2006-2020).

treatment are often financially unable to stay open when abortion services become illegal.63 Some communities are facing reductions in care because their obstetricians have moved or are considering moving to states where abortion is still legal.64

21. Even obstetric training is being impacted. Medical schools in anti-abortion states are limited in what they can teach about abortion, and young doctors are choosing to study — and eventually practice — elsewhere.65 A research study mapping US residency programs predicted that almost 44% of OB-GYN residency programs are located in states that have already banned or are likely to ban abortions.66 As more states ban or limit abortion, medical students may prefer to train in states where abortion is legal. Consequently, existing divides in healthcare access will deepen as many medical residents choose to practice where they trained.67

22. Anti-abortion legislation also has a chilling effect on patients’ access to healthcare services more broadly. Access to healthcare in the US depends in part on access to insurance, and for many low-income individuals, the most available insurance provider is the federal government-run Medicaid system. Enrollment in Medicaid is limited by income level, but income caps for the program are higher for pregnant and postpartum individuals.68 As a result, many low- and middle-income patients who have otherwise been excluded become eligible for the first time when they become pregnant.69 This increased access to healthcare includes coverage for pre- and postnatal care, but also for non-pregnancy-specific care such as health screenings, hospital visits, and emergency care.70 This window of increased access thus provides an opportunity for patients to be screened for a host of conditions.

23. But criminalization of certain pregnancy outcomes discourages engagement with the healthcare system, leading to reduced prenatal care and worse health outcomes for pregnant people and infants alike. For example, the number of women receiving any prenatal care

64 Id.
65 See O. Goldhill, “After Dobbs, U.S. medical students head abroad for abortion training no longer provided by their schools,” STAT (22 Oct. 2022), https://www.statnews.com/2022/10/18/medical-students-heading-abroad-for-abortion-training/ (detailing how medical schools in states with abortion bans are pairing up with programs in other states that allow abortions in an attempt to ensure that future doctors are adequately prepared. Many students interested in reproductive healthcare are considering moving to states where abortions are legal.).
markedly dropped in Tennessee while the state’s law criminalizing any prenatal drug use was in effect, as pregnant people were threatened with criminal prosecution for a host of pregnancy outcomes and therefore avoided contact with formal healthcare. 71 The reduction in access was more pronounced for populations marginalized along class lines 72 and was associated with measurably worse health outcomes for mothers, fetuses, and newborns. 73 New abortion bans and criminalization can be expected to instill fear in pregnant patients 74 and create confusion over potential criminal liability, further reducing access to healthcare for vulnerable populations while increasing punitive surveillance of marginalized women. 75 Pregnant people — even those who wish to continue their pregnancies — may forgo prenatal care to which they are entitled altogether to avoid falling under surveillance.

24. Abortion access is also threatened in states where abortion is still legal. Due to the rapidly changing legal landscape and fears of future legal consequences, some providers feel forced to suspend services even where abortion has not yet been outlawed. For instance, in West Virginia, the only abortion clinic in the state stopped performing abortions shortly after Dobbs was decided, even though the state’s pre-Roe abortion ban had not fully entered into force. 76 In Arizona, where a legislative attempt to ban abortion has been blocked by the courts, nine of the state’s ten clinics have nevertheless stopped providing abortions. 77 A provider in Arizona reported that she had decided to suspend abortion services because, as a Black doctor, she felt particularly vulnerable to potential criminalization. She noted “abortion is still legal but that would not stop someone from causing a legal disaster that I would not be able to recover from.” 78 Providers are hesitant to move to or continue practicing in states where restrictions are increasing or unstable, citing “an atmosphere … perceived as antagonistic to physicians.” 79 This dynamic deepens existing shortages of physicians, nurses, and other skilled providers.

25. The chaos has spilled over to states where abortion is expected to remain legal. As patients are displaced from their home states by abortion prohibitions, providers in states where abortion remains legal are seeing an influx of patients, placing a large strain on already overtaxed

78 Id.
79 Hospitals Fear Abortion Bans Will Worsen Staff Shortages,” Bloomberg Law (updated 9 Aug. 2022), https://news.bloomberglaw.com/health-law-and-business/hospitals-fear-abortion-bans-will-worsen-staff-shortages (“fears of being arrested for prescribing medications that could be unsafe for pregnancy, or for advising chemotherapy that requires ending a pregnancy… ‘The irony is that in states that pass these anti-abortion laws, there will be fewer OB GYN doctors willing to practice there. But there will be more need for them because there will be more pregnancies going to term,’ said Suzanna Sherry, a constitutional law expert at Vanderbilt University Law School.”).
Clinics in less restrictive states often do not have enough staff. As Dr. Serapio explained, it can be difficult to find qualified staff because of the need for specialized training and experience. Given the legal landscape over the past few years, obtaining the requisite formal and practical experience is difficult, so qualified staff was already in short supply.

26. Abortion providers also suffer risk to their physical safety and lives in the US. Both in their clinics and in their homes, many providers and other staff report being in near constant fear of attack from extremists within the anti-abortion movement. Extremist anti-abortion vigilantes have kidnapped, attacked, bombed, and even murdered abortion providers. In 2021 alone, the National Abortion Federation reported 1,465 incidents of violence against providers across the US. The widespread organized campaigns of harassment and violence appear to have been emboldened in recent years by the movement’s broader success in restricting abortion. Notably, those who target providers and clinic workers and harass abortion seekers often have ties to violent extremist movements. For instance, a number of violent anti-abortion extremists

K. Schorsch, “Staffing shortages in Illinois for abortion care,” NPR-WBEZ (12 May 2022), npr.org/local/309/2022/05/12/1098469190/staffing-shortages-in-illinois-for-abortion-care (“Illinois providers are expecting an additional 20,000 to 30,000 patients a year as people travel from other states that could ban or heavily restrict the procedure. That would be a nearly two-thirds increase in abortions across Illinois.” An Illinois doctor cites the healthcare worker shortage as “perhaps the biggest barrier to a full-scale increase that would meet the needs of folks coming from other states.”). Interview by Foley Hoag LLP with Dr. Elissa Serapio (29 July 2022). See also E. Reyes, “These California Nurse-Midwives Want to Provide Abortions. They’re Struggling to Get Trained,” Los Angeles Times (18 July 2022), latimes.com/california/story/2022-07-18/california-nurse-midwives-want-to-provide-abortions-struggling-to-get-trained.

A January 2020 unclassified report from the FBI outlined an ongoing increase in anti-abortion threats, disruption and violence, stating, “The FBI assess the increase in abortion-related extremist violent threats and criminal activity, including violations of the Freedom of Access to Clinic Entrances (FACE) Act, against targets including reproductive healthcare facilities (RHCFs) likely is driven in part by the recent rise in state legislative activities related to abortion services and access.” (emphasis added); National Abortion Federation, 2020 Violence & Disruption Statistics (2021), p. 2, https://prochoice.org/our-work/provider-security/#dflip-df_13683/3/.
were documented at the January 6, 2021 coup attempt at the US Capitol.\textsuperscript{87} As recently as January 15, 2023, an anti-abortion group carried out an arson attack on a clinic in Illinois.\textsuperscript{88}

B. Penalizing Healthcare: Criminalization, Civil Liability, and Involuntary Confinement

27. Following Dobbs, 13 states’ statutes now criminalize healthcare providers who perform abortions.\textsuperscript{89} Penalties include up to life in prison (Texas)\textsuperscript{90} and fines as much as $100,000 (Oklahoma).\textsuperscript{91} Some states also impose criminal liability for “aiding or abetting” abortion, making it a crime for any individual, whether a healthcare provider or not, to assist a pregnant person in obtaining an abortion.\textsuperscript{92} This can apply to hospital administrative staff, therapists, and other medical professionals who have discussed or provided information about obtaining an abortion; family, friends, or religious leaders; or even rideshare or cab drivers who

\textsuperscript{88} No patients or staff were present during the attack; a firefighter sustained life threatening injuries. T. Bella, “Arson Suspected at Illinois Planned Parenthood After State Expands Abortion Rights,” Washington Post (19 Jan. 2023), https://www.washingtonpost.com/nation/2023/01/19/abortion-planned-parenthood-arson-illinois/.

\textsuperscript{90} The Texas abortion ban classifies any attempt to induce an abortion as a second-degree felony if unsuccessful (punishable by up to 20 years in prison) and as a first degree felony (up to life in prison) “if an unborn child dies as a result of the offense.” Tx. Code § 170A.004(b).

\textsuperscript{91} Okla. Stat. tit. 63, § 1-731.4.

transport patients to abortion clinics. Employers, family members or friends who contribute financially or provide other forms of support can also be criminalized.

28. Individuals can also face civil penalties for “aiding and abetting” abortion in some states. Texas, for example, provides for privately enforced civil liability, in addition to its criminal ban. This threat of private suits places further pressure on providers to cease providing any abortion care whatsoever — even for patients who experience complications making abortion medically necessary and permitted under the state’s criminal restrictions — because they may have to defend themselves from a costly lawsuit brought by a bystander. As Dr. Serapio explained, the law has left providers in Texas feeling potentially surveilled by everyone around them and questioning whether private discussions with their patients could land them in front of a judge.

---

97 J. Gerson, “‘No one wants to get sued’: Some abortion providers have stopped working in Texas” The 19th (15 Sept. 2021), https://19thnews.org/2021/09-abortion-providers-texas-stopped-working-under-threat-sued/ (“‘Even if abortion providers win in every single case brought against them [under SB 8], that burden of having to have a lawyer to defend yourself, traveling all over the state to do so — that alone threatens to shut down abortion providers,’ said Marc Hearron, senior counsel at the Center for Reproductive Rights”). In December 2022, a Texas court dismissed a suit from an unaffected, out of state plaintiff against a doctor who had performed an abortion in defiance of the law. The court held that the plaintiff lacked standing to bring the case, but left the door open for plaintiffs with ties to a case to sue providers. See D. Solomon, “Texas’s Abortion ‘Bounty’ Law Just Lost Its First Test. Here’s What That Means,” Texas Monthly (9 Dec. 2022), https://www.texasmonthly.com/news-politics/texas-abortion-bounty-law-just-lost-first-test/.

98 Interview by Foley Hoag LLP with Dr. Elissa Serapio (25 July 2022). Others involved in abortion care, including lawyers, have the same concerns. I. Mitchell, “Texas Freedom Caucus Warns Law Firm of Criminal Liability for Covering Employees’ Abortion Costs,” The Texan (11 July 2022), available at
29. Some states are attempting to enforce their bans across state lines. Although the legality of this strategy is uncertain, lawmakers in several states that have banned abortion have proposed legislation to “allow private citizens to sue anyone who helps a resident of that state… terminate a pregnancy outside the state,” from an out-of-state physician who performs a procedure to a driver who conveys a patient across state lines. For example, Missouri lawmakers introduced a bill in 2021 that claimed jurisdiction over any pregnancy conceived within the state or where the parents were Missouri residents. While the law was not adopted, another bill introduced last year is intended to allow private enforcement across state lines. These cross-border efforts expand the threat of prosecution beyond providers practicing in restrictive states, creating uncertainty for providers even in states where abortions remain legal, and infringing on women’s freedom of movement.

30. Pregnant individuals themselves are also at risk of criminalization. In some states, officials have indicated a willingness to arrest those who self-induce abortion. In Idaho, a statute from 1973 remains a potential threat: a woman “who purposely terminates her own pregnancy otherwise than by a live birth” can be found guilty of a felony. Similarly, some states have begun to explore criminalization approaches based on “fetal personhood,” a concept which

https://thetexan.news/texas-freedom-caucus-warns-law-firm-of-criminal-liability-for-covering-employees-abortion-costs/ (members of the Texas Freedom Caucus promise to file legislation in the upcoming session to “require the State Bar of Texas to disbar any lawyer that has violated Texas abortion laws.”). See also E. Bowman, “As states ban abortion, the Texas bar is considering a way to punish lawyers,” NPR (11 July 2022), https://www.npr.org/2022/07/11/1107741175/texas-abortion-bounty-law. See also M. Kornfield, “A website for ‘whistleblowers’ to expose Texas abortion providers was taken down-again” (6 Sept. 2021), https://www.washingtonpost.com/nation/2021/09/06/texas-abortion-ban-website/.

106 Idaho Code §18-606.

attributes legal rights to a fetus. If adopted, these provisions will increase prosecutions targeting pregnant people by classifying abortion as homicide and permitting prosecution of those who receive such treatment for murder or manslaughter. A Louisiana House of Representatives committee voted in May 2022 to amend criminal laws to make abortion qualify as a homicide. While the bill was subsequently withdrawn, other states are exploring fetal personhood approaches to criminalizing a range of pregnancy outcomes.

31. Even prior to Dobbs, prosecutors charged pregnant women and girls in situations where they suspected that the woman’s actions during pregnancy harmed the fetus. Alleged conduct deemed worthy of prosecution went beyond suspected abortions to include using drugs (even where prescribed by a doctor), drinking alcohol, and falling down stairs. For example, in 2020, a pregnant woman from Alabama was prosecuted for using pain medication prescribed by her doctor, even though it was established after the baby was born that the child suffered no adverse consequences. In 2014, a pregnant woman who took just half a Valium pill and

Pregnancy Justice, “Who Do Fetal Homicide Laws Protect? An Analysis for a Post-Roe America,” https://www.nationaladvocatesforpregnantwomen.org/wp-content/uploads/2022/08/Feticide-Brief-w-Appendix.pdf. International human rights law (IHRL) makes clear that its protections start at birth and that fetal personhood has no basis in IHRL. See Working Group on discrimination against women and girls in law and practice, Women's Autonomy, Equality and Reproductive Health in International Human Rights: Between Recognition, Backlash and Regressive Trends (Oct. 2017), https://www.ohchr.org/sites/default/files/Documents/Issues/Women/WG/WomensAutonomyEqualityReproductiveHealth.pdf (“It was well settled in the 1948 [Universal Declaration of Human Rights] and upheld in the ICCPR that the human rights accorded under IHRL are accorded to those who have been born. ‘All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.’”). The Working Group cites inter alia the travaux préparatoires of Article 6 of the ICCPR, in which proposed amendments suggesting that the right to life applied before birth were specifically rejected by states. UN GAOR, 12th Session, Agenda Item 33, at 119 (e), (q), UN Doc. A/3764, 1957.

whose child was born healthy was charged with “chemical endangerment of a child.” See N. Martin, “Take a Valium, Lose Your Kid, Go to Jail,” ProPublica (23 Sept. 2015), https://www.propublica.org/article/when-the-womb-is-a-crime-scene.

Pregnancy Justice, one of the organizations involved in preparing this submission, has documented more than 1700 instances of arrests, forced medical interventions, and other deprivations of liberty of pregnant people since 1973, with 1331 of these cases occurring between 2006-2020. Thus even in states that do not explicitly criminalize women who seek abortions, authorities have used civil commitment and involuntary substance abuse treatment to detain individuals for allegedly endangering their fetuses. Following their 2016 country visit to the US, the UN Working Group on arbitrary detention observed, “The civil proceedings to commit pregnant women are often in closed hearings, lack meaningful standards and provide few procedural protections. In some states, important early hearings may take place without the mother having legal representation, as the pregnant woman does not have the right to appointed counsel although the fetus has a court-appointed guardian ad litem.”

Pregnant individuals have been arbitrarily detained under these policies for months at a time. Because spontaneous miscarriage and self-managed abortion are medically indistinguishable in most cases, prohibitions on abortion will predictably lead to the investigation and detention of many women experiencing miscarriages as well as those self-managing abortions.

See NWHN Staff, “Consumer Health Info: Medication Abortion and Miscarriage” (updated 15 Aug. 2019), https://nwhn.org/abortion-pills-vs-miscarriage-demystifying-experience/ (“From a medical perspective, there is no physically significant difference between a medication abortion and a spontaneously occurring miscarriage. For example, the medicines used in medication abortion are used to help safely manage an incomplete miscarriage.”).
33. Those targeted for detention and criminalization are more likely to be Black, Indigenous, and people of color (BIPOC) individuals,\textsuperscript{121} contributing to the already disproportionately high level of incarceration of BIPOC persons in the US.\textsuperscript{122} For example, out of 413 cases of arrest or forced intervention of pregnant persons documented between 1973 and 2005, 71% were economically disadvantaged women, 59% were women of color, and 52% were Black.\textsuperscript{123} Communities of color, especially Black communities, are disproportionately impacted by pregnancy criminalization due in part to the heightened policing of these communities under the auspices of the "war on drugs."\textsuperscript{124} As the Special Rapporteur on the right of everyone to the enjoyment of the highest attainable standard of physical and mental health has already described, "given that the country’s criminal legal system already disproportionately polices women and girls of African descent, [this] is the population group that suffers the most from increased surveillance and criminalization."\textsuperscript{125}

34. Finally, the criminalization of abortion threatens to further affect the relationship between patients and their healthcare providers. Providers fear that their actions, or even their words, could be used against them in court. Patients may be afraid to seek care\textsuperscript{126} and worry that providers will act as an arm of the police by collecting evidence and reporting them to the authorities if they suspect an abortion has been induced.\textsuperscript{127} Since BIPOC individuals already

\textsuperscript{122} “Criminal Justice Fact Sheet,” NAACP. https://naacp.org/resources/criminal-justice-fact-sheet; https://www.prisonpolicy.org/blog/2021/10/08/indigenouspeoplesday/ (“In jails, Native people had more than double the incarceration rate of white people, and in prisons this disparity was even greater.”).

\textsuperscript{125} Report by the Special Rapporteur on the right of everyone to the enjoyment of the highest attainable standard of physical and mental health: Racism and the right to health (U.N. Doc. A/77/197) (20 July 2022).

\textsuperscript{127} A recent study by If/When/How found “at least 61 instances where people were investigated or prosecuted for allegedly self-managing an abortion or helping others self-manage. Among the cases involving adults, 26% were reported by acquaintances (including family, friends, and neighbors) and 45% were reported by care professionals (including doctors, nurses, and social workers) after seeking care...Whether criminalization has occurred out of malice or simply due to ignorance of reporting requirements, clinicians, social workers, and other clinical support providers have caused substantial harm to patients by calling law enforcement after the loss of pregnancy because they suspect the miscarriage was intentionally induced.” J. Perritt, “Don’t Report Your Abortion Patients to Law Enforcement—Self-managed abortion does not legally need to be reported,” Medpage Today (5 Nov. 2022), https://www.medpagetoday.com/opinion/second-opinions/101581; (citing L. Huss et al., Self-Care, Criminalized: August 2022 Preliminary Findings, If HOW WHEN: LAWYERING FOR REPRODUCTIVE JUSTICE 2-3 (2022)). See also E. Bazelon, “Purvi Patel Could Be Just the Beginning,” The New York Times (1 Apr. 2015), https://www.nytimes.com/2015/04/01/magazine/purvi-patel-could-be-just-the-beginning.html.
face well-documented barriers to obtaining proper medical treatment and are subject to over-policing, they are put at particular risk.

35. The ultimate impacts of abortion criminalization have not yet been fully realized, but it is reasonable to expect this criminalization to have a chilling effect on women’s health generally, to increase risks to women’s lives, and to lead to further arbitrary detention of women and girls.

C. Threats to Privacy from Increased Digital Surveillance

36. The proliferation of abortion bans in the US has decimated reproductive autonomy — the power to control all aspects of one’s reproductive health — which is “at the very core of [individuals’] fundamental right[s] to equality and privacy.” The right to privacy of individuals (irrespective of whether or not they are pregnant) and the rights of medical professionals are also threatened by states’ use of digital surveillance to track the identities of people who seek or provide reproductive healthcare.

37. Because many states now criminalize abortion, law enforcement officials in these states are using electronic data to prosecute patients or those who help them access abortion. This personal information is wide in scope and may include:

- location data to show if someone visited an abortion clinic, substance use disorder treatment center, or other health facility;
- search histories on medication abortion, clinics, and general information on abortion;
- menstrual cycle tracking applications; and
- communications data such as text messages about pregnancy and abortion.

38. The pre-Dobbs case of Latice Fisher, who was charged with second-degree murder after a stillbirth when investigators found the words “mifepristone” and “misoprostol” in her phone’s

---

search history, shows how these tactics were used even while Roe was still in force.¹³³ Now that abortion is explicitly criminalized in many states, law enforcement’s use of digital surveillance to track abortions is likely to increase.

39. Notably, law enforcement can access many of these sensitive personal records without a warrant. The legal standards for accessing novel digital evidence like location data vary depending on whether the data are obtained directly from the suspect (as in a search of a person’s cell phone), via an order issued to a third party (e.g. warrants issued to Google or Meta), or through purchases from data brokers¹³⁴ (i.e. individuals or companies that collect and aggregate many types of personal information usually from online sources).¹³⁵ This means that many of the usual limitations on police searches designed to protect defendants and prevent overbroad surveillance do not apply to all law enforcement access to personal information.¹³⁶

40. Purchasing data from brokers provides particularly easy and so-far unregulated law enforcement access to an unprecedented volume of sensitive personal information for use in prosecuting individuals seeking abortions — or even reviewing their options for reproductive care — often without any oversight by courts.¹³⁷

¹³⁵ Federal courts have not ruled directly on whether the particularized probable cause standard applicable to warrant requests is required for police to conduct keyword search queries or “geofenced” (i.e. location-bound) searches of data held by third parties, including Google. At the moment, law enforcement is relying on vague and less-protective statutory standards, such as the Stored Communication Act’s “reasonable grounds [to believe that records are] relevant and material to an ongoing investigation” standard. Congressional Research Service, “Abortion, Data Privacy, and Law Enforcement Access: A Legal Overview” (updated 8 July 2022), https://crsreports.congress.gov/product/pdf/LSB/LSB10786.

¹³⁷ B. Cyphers, “How Law Enforcement Around the Country Buys Cell Phone Location Data Wholesale,” EFF (31 Aug. 2022), https://www.eff.org/deeplinks/2022/08/how-law-enforcement-around-country-buys-cell-phone-location-data-wholesale. Some data broker services are designed and marketed specifically for law enforcement agencies, who purchase subscriptions to the services – rather than seeking a warrant – in order to access advanced search features. The Electronic Frontier Foundation documented a lack of agency-level policies governing the use of these services, and found that most agencies did not seek either warrants or subpoenas to access the data. See also F. Patel & A. Shahzad, “With Roe v. Wade at Risk, Digital Surveillance Threatens Reproductive Freedom,” Just Security (17 May 2022), https://www.justsecurity.org/81547/with-roev-wade-at-risk-digital-surveillance-threatens-reproductive-freedom/.
41. As with most aspects of abortion bans, these surveillance tactics will disproportionately affect marginalized individuals. BIPOC women, particularly Black women, are more likely to suffer miscarriages, which are generally indistinguishable from medically induced abortions. Combined with existing higher law enforcement surveillance rates of these communities, these factors mean that BIPOC women will face higher rates of privacy infringement. Additionally, low-income women face surveillance and privacy intrusions not only from the government as a result of receiving government benefits, but also from employers monitoring workplace conduct and performance. They also face financial barriers to protecting their privacy. As a result, the privacy of BIPOC, low-income, and otherwise marginalized women will be violated disproportionately.

42. Private parties including anti-abortion activists also use technology to gather data on both providers and pregnant people. For instance, anti-abortion groups have used mobile geo-fencing technology to target patients at abortion clinics with anti-abortion advertisements. Anti-abortion centers known as “crisis pregnancy centers” and “abortion alternatives” hotlines also collect data on pregnant individuals. In states such as Texas, which offer a bounty for citizens to bring civil lawsuits against anyone aiding and abetting an abortion, private parties may have a particular incentive to purchase abortion-related data. In May 2022, journalists revealed that they were able to purchase location data of individuals who visited Planned Parenthood centers for just $160 from a data broker — in the context of possible $10,000 bounties under the Texas law. The purchased data are purportedly

139 National Women’s Health Center, “Consumer Health Info: Medication Abortion and Miscarriage” (updated 15 Aug. 2019), https://nwahn.org/abortion-pills-vs-miscarriage-demystifying-experience/ (“From a medical perspective, there is no physically significant difference between a medication abortion and a spontaneously occurring miscarriage. For example, the medicines used in medication abortion are used to help safely manage an incomplete miscarriage.”).

142 See E. Joh, Dobbs Online: Digital Rights as Abortion Rights (5 Sept. 2022) (FEMINIST CYBERLAW, A. Levendowski & M. Jones (eds.), forthcoming 2023), https://ssrn.com/abstract=4210754 (noting that low-income women are less able to afford more privacy-protective phones, apps, or other services).

“anonymized,” but due to the small number of devices visiting these locations, it is often possible to de-anonymize the data (i.e. link to specific individuals). These practices are emerging and evolving in a landscape without protections, as “the U.S. lack[s] a comprehensive set of federal digital privacy laws.”

D. Freedom of Thought, Conscience and Religion or Belief

43. Some forms of anti-abortion legislation in the US infringe upon the right to freedom of thought, conscience, and religion or belief under international human rights law. First, anti-abortion laws that prevent providers and/or clinic staff from providing abortions to pregnant persons may infringe upon the provider’s freedom to manifest their freedom of conscience and religion or belief. For some healthcare providers, their religion or beliefs (including non-theistic beliefs) mandate that they provide healthcare (including abortion) when a person’s life, health, or well-being is at risk. For example, Jewish physicians in Florida have explained in a lawsuit that their faith compels them to provide abortion to patients where the patient’s life, health or well-being is at risk. For these and other healthcare workers, criminal abortion laws eviscerate their freedom to manifest a key aspect of their faith.

44. Even religious leaders and clergy members risk falling afoul of abortion laws in the US for providing pastoral care, guidance, and religious teaching. For faith leaders whose belief system affirms the right to abortion, counseling on reproductive healthcare in accordance with their faith could fall within the aforementioned broad crime of “aiding or abetting” an abortion. Members of the Unitarian Universalist Church in Florida have been forced to turn to the courts to seek injunctive relief against the law’s attempt to punish them for providing ministry and serving their congregants in this way. Specifically, these clergy members

---

149 The providers in Florida who have resorted to the courts to assert their right to freedom of religion or belief are part of a long tradition of healthcare workers providing reproductive healthcare, at least in part, due to their faith. See A Religious Right to Abortion: Legal History and Analysis, Columbia Law School (Aug. 2022), https://lawrightsreligion.law.columbia.edu/sites/default/files/content/LRRP%20Religious%20Liberty%20%26%20Abortion%20Rights%20memo.pdf.

24
underscore that counseling in line with their faith involves explaining the tenet of the “God-given right to self-determination over their own bodies and reproductive lives.” But if a pregnant person has an abortion following a conversation on this area of the church’s doctrine, the clergy members could face prosecution for aiding, abetting, or encouraging abortion.

45. Crucially, laws that criminally prosecute or otherwise punish people of faith who feel obligated by their religion or belief to help others access abortion, or to counsel congregants on abortion care, do not meet the thresholds set by international law that would permit the State to limit their freedom to practice their religion or belief. The right to manifest one’s religion or belief may be subject only to such “limitations as are prescribed by law and are necessary to protect public safety, order, health, or morals or the fundamental rights and freedoms of others.”

E. Disproportionate Impact on Marginalized Populations

46. Dobbs is devastating for all people who can become pregnant, but it has had and will have an outsized impact on certain marginalized groups who already face documented discrimination within and outside the healthcare system. This includes BIPOC women, people of diverse gender identities and sexual orientations, migrants, persons with disabilities, people who are low-income or living in poverty, children, and rural residents. These groups often have poorer health outcomes compared to other populations, and Dobbs will worsen these

---

151 Id.
disparities, since individuals who belong to these groups have fewer resources and face discrimination from the healthcare community.¹⁵⁵

47. For people with disabilities, “[c]onstitutional protection for bodily autonomy is of vital importance... because that protection has far too often been denied to them in both reproductive and non-reproductive contexts.”¹⁵⁶ The Autistic Self Advocacy Network and the Disability Rights Education and Defense Fund note in their *Dobbs amicus curiae* brief that the US has a history of engaging in the forced sterilization of persons with disabilities, particularly targeting people of color with disabilities.¹⁵⁷ Individuals with disabilities have been continuously denied reproductive autonomy, and many fear the *Dobbs* decision will further entrench these policies and erode what progress they have achieved toward the protection of their bodily autonomy.¹⁵⁸

48. Communities marginalized by racial discrimination and oppression also face barriers in accessing healthcare, which severely and negatively impacts these communities. Indigenous Americans experience statistically worse healthcare outcomes than other populations in the US\textsuperscript{159} and already had difficulty accessing abortion long before \textit{Dobbs}.\textsuperscript{160} The same is true for Black Americans, who have always faced high barriers to accessing healthcare.\textsuperscript{161} Hence, individuals who belong to more than one marginalized group, such as rural Black Americans, face especially high barriers.\textsuperscript{162} Access to abortion — and indeed to quality healthcare — has never been equitable for persons from marginalized communities in the US. \textit{Dobbs} exacerbates many of these inequities by, for example, requiring individuals to travel farther for care and often out of state. Women of color are more likely to fall below the poverty line than white women and therefore feel the costs of interstate travel for healthcare particularly acutely. They are also less likely to have paid time off or paid sick leave to allow for travel, and face additional discrimination to obtain necessary healthcare.\textsuperscript{163}

49. Migrants and asylum seekers face further barriers in accessing reproductive healthcare. Irregular immigration status prevents millions of individuals from qualifying for health insurance programs in general, and creates particular barriers to accessing insurance that covers reproductive healthcare services. Immigrants also face mobility restrictions. Many US states require documentation of immigration status in order to receive a driver's license, and some of the most restrictive bans on abortion are in states (such as Texas) that host a network of Border Patrol checkpoints. Undocumented immigrants who seek to cross state lines to access abortion care are at risk of arrest, detention, and deportation. As Dr. Serapio explained, for individuals who are undocumented and/or unauthorized, or who have undocumented and/or unauthorized family members, travel out of state is therefore not an option due to the possible legal ramifications, even where resources are available.

50. Youth with migrant status or with families that have mixed migration or documentation statuses face particular barriers in states where parental consent is required for abortion. For example, immigrant youth may lack access to a qualifying parent living in the country; immigrant parents may not be able to provide legally valid consent if they lack documentation of their legal status; and younger people with migrant status may be deterred from seeking healthcare or involving a parent by a general fear of immigration consequences for themselves or their families. In these cases, immigrant youth may be forced to seek a judicial bypass or remain pregnant involuntarily.

51. State abortion bans have also led to the closure of reproductive health clinics that, in addition to abortion, provide non-abortion-related medical care upon which many individuals from vulnerable groups rely. In general, the states enacting bans have some of the worst healthcare systems in the country and have historically dedicated few resources for

167 Interview by Foley Hoag LLP with Dr. Elissa Serapio (25 July 2022).

low-income residents.\textsuperscript{171} Lawmakers passing abortion bans have for years refused to address these problems.

52. Rates of sexual violence against individuals in marginalized communities are also significantly higher than for the rest of the population.\textsuperscript{172} Since many state laws prevent pregnant persons from obtaining an abortion even in circumstances of rape or incest,\textsuperscript{173} these groups face an increased risk of being forced to continue a pregnancy that is the result of sexual violence. Even where a state has a legal exception allowing for abortions in cases of rape, these exceptions are extremely difficult for survivors to access in practice because they generally require filing an official police report before a provider can perform an abortion.\textsuperscript{174} Given low rates of reporting of sexual violence, especially among marginalized communities including BIPOC and individuals of diverse gender identities and sexual orientations, these requirements effectively bar survivors from accessing abortion care.\textsuperscript{175}

53. Finally, \textit{Dobbs} obliges many women to travel farther distances to obtain an abortion, due to state bans and clinic closures.\textsuperscript{176} This means taking time off work, arranging childcare, and

\begin{itemize}
\item \textsuperscript{171} See K. L. Gilbert \textit{et al.}, “Dobbs, another frontline for health equity,” \textit{Brookings Institution} (30 June 2022), https://www.brookings.edu/blog/how-we-rise/2022/06/30/dobbs-another-frontline-for-health-equity/ (“Of the 13 states that have an immediate trigger law, 9 of them rank number 30 or lower in overall state health using data from America’s Health Rankings. More than 10 of these states rank in the bottom half for public health and healthcare quality.”).
\item \textsuperscript{173} Most states with abortion bans in effect do not have any exception for pregnancies that result from rape or incest. F. Cineas, “Rape and incest abortion exceptions don’t really exist,” \textit{Vox} (22 July 2022), https://www.vox.com/23271352/rape-and-incest-abortion-exception. See, e.g., Alabama Human Life Protection Act (H.B. 314, § 7); Wisconsin § 940.04(5); Wyoming § 35-6-102.(b); Texas Health & Safety Code Title 2, Subtit. H, Ch. 170A; Tennessee Code Ann. § 39-15-213.(c)(1)-(3); South Dakota, § 22-17-5.1; Miss. Code Ann. § 41-41-45.(2) (contemplating rape only); Louisiana § 40:1061.F-G; Kentucky § 311.772.(4)(a)-(b); Arkansas A.C.A. § 5-61-304(a); Arizona A.R.S. § 13-3603.02.A; Oklahoma S.B. 612 Section A.B.3.a; Missouri (§ 188.017 R.S.Mo.).
\item \textsuperscript{174} Most states with a rape exception to their abortion ban require the victim to report the rape to the police in order to obtain an abortion. F. Cineas, “Rape and incest abortion exceptions don’t really exist,” \textit{Vox} (22 July 2022), https://www.vox.com/23271352/rape-and-incest-abortion-exception.
obtaining the funds to pay for travel expenses and accommodations. Such laws have a disparate effect on persons of lower socio-economic status including those living in poverty. A pre-Dobbs study “found that the average travel distance to an abortion clinic [would] increase threefold — from nearly 40 to more than 113 miles — if the U.S. Supreme Court overturn[ed] Roe and restrictive state legislation kick[ed] in.” This prediction has been borne out: early post-Dobbs analysis shows that travel time to clinics has increased significantly for people across the country. Since individuals in marginalized groups are more likely to be low-income, this travel, and thus access to reproductive services, is often beyond their means. A higher percentage of individuals from these marginalized communities will be unable to travel out of state for abortion and thus will be forced to bear a child for which they likely have fewer resources to provide.

54. These barriers to access create a vicious cycle of poverty and marginalization, reinforcing existing inequalities. A study on abortion access – conducted before Dobbs was decided – illustrates how abortion denial can reinforce economic and social marginalization. Based on thousands of interviews with women who sought, but were denied, an abortion, the study found that such patients are more likely to: (1) be exposed to significant health risks from delivery; (2) experience negative health outcomes over the next five years; (3) scale back their aspirations and career plans; (4) face long-term economic hardship; and (5) raise their children in poverty. In short, as the author of the study explained in a recent article, “we are about to see a deepening of existing inequalities…Being denied an abortion [will] lead[] to . . . greater poverty and health risks.”

III. **Anti-Abortion Legislation Violates International Law**

55. By overturning the established constitutional protection for access to abortion, and through the passage of the state laws discussed above, the US is in violation of its obligations under international human rights law, codified in a number of human rights treaties to which it is a party or a signatory.

56. Specifically, the US has ratified the International Covenant on Civil and Political Rights (ICCPR), the International Convention on the Elimination of All Forms of Racial Discrimination (ICERD), and the Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (CAT).

57. The US also signed, but has not yet ratified, the International Covenant on Economic, Social and Cultural Rights (ICESCR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), the Convention on the Rights of the Child (CRC), and the Convention on the Rights of Persons with Disabilities (CRPD). As a signatory to these treaties, the US must refrain from acts that would defeat their object and purpose.

58. These treaties enshrine in law numerous complementary human rights. The US has committed to respect and protect these rights; instead, it is infringing them through restrictions on abortion access. As eight Special Procedures mandate holders recently reaffirmed: “Over time, States and human rights bodies clarified that human rights treaty obligations encompass the reproductive rights of women and girls, including safe and legal abortion access.” These human rights obligations include, but are not limited to, the rights to: life; health; privacy; (ICERD), https://treaties.un.org/Pages/ViewDetails.aspx?chapter=4&src=IND&mtdsg_no=IV-2&chapter=4&clang=_en (US ratification, 21 Oct. 1994).

liberty and security of person; to be free from torture and other cruel, inhuman, or degrading treatment or punishment (CIDT); freedom of thought, conscience, and religion or belief; equality and non-discrimination; and to seek, receive, and impart information.192

59. First, abortion laws and policies in the US endanger the life and health of persons seeking abortions and people in need of emergency reproductive healthcare. These policies contravene the US’ human rights obligations to respect the right to life193 and the right to health.194 As the Human Rights Committee (HRC) has confirmed, States parties to the ICCPR must not adopt anti-abortion measures that “result in violation of the right to life of a pregnant woman or girl” and must “provide safe, legal and effective access to abortion where the life and health of the pregnant woman or girl is at risk, or where carrying a pregnancy to term would cause the pregnant woman or girl substantial pain or suffering…”195 States parties should also “remove existing barriers to effective access by women and girls to safe and legal abortion…and should not introduce new barriers.”196 Other treaty bodies — including the Committee on Social, Economic and Cultural Rights (CESCR), the Committee on the Elimination of Discrimination against Women (CEDAW Committee), the Committee on the Rights of the Child (CRC Committee), the Committee on the Elimination of Racial Discrimination (CERD Committee), and the Committee on the Rights of Persons with Disabilities (CRPD Committee) — have unanimously and unambiguously recognized that access to abortion, and the ability to make free decisions regarding abortion, are indispensable to the fulfillment of the right to health.197

192 As recently summarized by the Working Group on discrimination against women and girls: “sexual and reproductive health rights are clearly established under international law. They are an integral part of a number of civil and political rights that underpin the physical and mental integrity of individuals and their autonomy, such as the rights to life, liberty and security of person, freedom from torture and other cruel, inhuman or degrading treatment, privacy and respect for family life, as well as economic, social and cultural rights, such as the rights to health, education and work and the right to enjoy the benefits of scientific progress, and the cross-cutting rights of non-discrimination and equality.” Working Group on discrimination against women and girls, Women’s and girls’ sexual and reproductive health rights in crisis (U.N. Doc. A/HRC/47/38) (28 Apr. 2021), ¶ 18.

193 See ICCPR, Art. 6.

194 See ICERD, Art. 5(e)(iv). See also ICESCR Art. 12; CEDAW Arts. 11(1)(f), 12, 14(2)(b); CRPD Art. 25; CRC Art. 24. See also CESC, General Comment No. 22 (2016) on the right to sexual and reproductive health (U.N. Doc. E/C.12/GC/22) (2 May 2016), ¶¶ 10-11, 13-14, 45, 49; CRC Committee, General comment No. 15 (2013) on the right of the child to the enjoyment of the highest attainable standard of health (U.N. Doc. CRC/C/GC/15) (17 Apr. 2013), ¶ 56; Report of the Special Rapporteur on the right of everyone to the enjoyment of the highest attainable standard of physical and mental health, Violence and its impact on the right to health (U.N. Doc. A/HRC/50/28) (14 Apr. 2022), ¶ 20 (describing how “States violate the right to health when they fail to take effective steps to prevent third parties from undermining the enjoyment of the right to sexual and reproductive health”).

196 Id.

60. In addition to the rights to life and health, abortion restrictions in the US also infringe the right to privacy by allowing states to restrict reproductive choices and thereby to interfere with a pregnant individual’s physical and psychological integrity. HRC jurisprudence has firmly established that an individual’s decision to seek an abortion falls under the scope of the right to privacy. The HRC has also found that some abortion bans, similar to those being enacted in the US, constitute impermissible interference with the ability to decide whether and how to proceed with a pregnancy, contrary to the right to privacy protected by Article 17 of the ICCPR. Some US laws, particularly those imposing broad accessory liability on anyone who “advise[s] or encourage[s]” a woman to get an abortion also infringe the freedom of a pregnant person to seek, receive, and impart information and ideas, guaranteed by Article 19 of the ICCPR.

61. Further, certain state laws, particularly those that criminalize abortion and/or provide no exception in the event of rape, incest, threat to the life or health of the pregnant person, or fatal fetal anomaly, violate the right to be free from torture and other CIDT. The Committee against Torture (CAT Committee) has acknowledged that abortion laws and denial of abortion can result in “physical and mental suffering so severe in pain and intensity that as well as related services and information are essential aspects of women’s reproductive health and a prerequisite for safeguarding their human rights to life, health, equality before the law and equal protection of the law, non-discrimination, information, privacy, bodily integrity and freedom from torture and ill treatment.”

CEDAW Committee, L.C. v. Peru (U.N. Doc. CEDAW/C/50/D/222009) (2011), ¶ 8.15, https://www2.ohchr.org/english/law/docs/cedaw-c-50-d-22-2009_en.pdf (“[T]he Committee considers that, owing to her condition as a pregnant woman, L.C. did not have access to an effective and accessible procedure allowing her to establish her entitlement to the medical services that her physical and mental condition required.”); CERD Committee, Concluding observations on the combined tenth to twelfth reports of the United States of America (U.N. Doc. CERD/C/USA/CO/10-12) (21 Sept. 2022), ¶¶ 35-36.

198 See ICCPR, Art. 17; CRC, Art. 16.

199 The Human Rights Committee has found violations of the right to privacy in every case it has considered when the State interfered with reproductive decision-making or abortion access. See HRC, Whelan v. Ireland, CCPR/C/119/D/2425/2014 (“Whelan v. Ireland”), ¶ 7.8; HRC, Mellet v. Ireland, CCPR/C/116/D/2334/2013 (“Mellet v. Ireland”), ¶ 7.7-7.8; HRC, K.L. v. Peru, CCPR/C/85/D/1153/2003 (“K.L. v. Peru”), ¶ 6.4; HRC, V.D.A. (on behalf of L.M.R.) v. Argentina, CCPR/C/101/D/1608/2007 (“V.D.A. v. Argentina”), ¶ 9.3; HRC, General Comment 28 (2000) on the equality of rights between men and women (U.N. Doc. CCPR/C/21/Rev.1/Add.10) (29 Mar. 2000), ¶ 20 (“States parties must provide information to enable the Committee to assess the effect of any laws and practices that may interfere with women’s right to enjoy privacy” such as “where States impose a legal duty upon doctors and other health personnel to report cases of women who have undergone abortion. . . . States parties should report on any laws and public or private actions that interfere with the equal enjoyment by women of the rights under article 17, and on the measures taken to eliminate such interference and to afford women protection from any such interference.”).

200 See Whelan v. Ireland, ¶ 7.9; Mellet v. Ireland, ¶ 7.8; K.L. v. Peru, ¶ 6.4.

202 ICCPR, Art. 19.

204 See CAT, Art. 16; ICCPR, Art. 7; CRC, Arts. 19, 37; CRPD, Art. 15.
as to amount to torture,”[205] a view echoed by the former Special Rapporteur on torture and other cruel, inhuman or degrading treatment or punishment.[206]

62. The CAT Committee has also affirmed that narrow exceptions only to save the life of the pregnant person, but not permitting abortions to preserve their health, are not sufficient to satisfy the requirement that States parties refrain from adopting policies amounting to torture or CIDT.[207] The HRC has likewise found that restrictions on access to abortion in cases of rape, incest, fetal anomaly, or to protect the life or health of the pregnant person violate the right to be free from torture and other CIDT under Article 7 of the ICCPR.[208] Notably, the HRC explicitly acknowledged that the right protected by Article 7 “relates not only to acts that cause physical pain but also to acts that cause mental suffering.”[209] The CEDAW Committee has also found that “criminalization of abortion, denial or delay of safe abortion and/or post-abortion care, [and] forced continuation of pregnancy... are forms of gender-based violence that... may amount to torture or cruel, inhuman or degrading treatment.”[210]

63. The arrest and imprisonment of individuals on abortion-related charges — including those experiencing miscarriage or stillbirth — infringes upon the right to liberty and security of the person protected by Article 9 of the ICCPR.[211] The Special Rapporteur on health has explained the link between abortion restrictions and deprivations of the right to liberty: “Where abortion is illegal, women may face imprisonment for seeking an abortion and emergency services for pregnancy-related complications, including those due to miscarriages.”[212] In 2018, when reviewing El Salvador’s compliance with the ICCPR, the HRC specifically urged the State party to “suspend immediately the criminalization of women for the offence of abortion.” The HRC also urged the State party to “review all cases of women who have been imprisoned for abortion-related offences, with the aim of ensuring their release.”[213]

---

[206] See HRC, Report of the Special Rapporteur on torture and other cruel, inhuman or degrading treatment or punishment (U.N. Doc. A/HRC/31/57) (5 Jan. 2016), ¶ 44 (“The denial of safe abortions and subjecting women and girls to humiliating and judgmental attitudes in such contexts of extreme vulnerability and where timely health care is essential amount to torture or ill treatment.”).
[207] See CAT Committee, Concluding observations on the third periodic report of the Philippines (U.N. Doc. CAT/C/PHL/CO/3) (2 June 2016), ¶ 40(b) (urging the state to “[r]eview its legislation in order to allow for legal exceptions to the prohibition of abortions in specific circumstances such as when the pregnancy endangers the life or health of the woman, when it is the result of rape or incest and in cases of foetal impairment…”) (emphasis added).
[208] See K.L. v. Peru, ¶ 6.3; Mellet v. Ireland, ¶¶ 7.4-7.6; Whelan v. Ireland, ¶¶ 7.4-7.7.
[209] V.D.A. v. Argentina, ¶ 9.2. See also HRC, General comment No. 36, Art. 6: right to life (U.N. Doc. CCPR/C/GC/36) (3 Sept. 2019), ¶ 8 (“States parties must provide safe, legal and effective access to abortion where the life and health of the pregnant woman or girl is at risk, or where carrying a pregnancy to term would cause the pregnant woman or girl substantial pain or suffering, most notably where the pregnancy is the result of rape or incest or where the pregnancy is not viable.”) (emphasis added).
[211] See ICCPR, Art. 9.
64. Expanding the grounds for civil or administrative detention of pregnant individuals for the “protection” of the fetus also violates the right to be free from arbitrary arrest or detention. Observing the trend of civil confinement of pregnant individuals for suspected use of drugs following a country visit in 2016, the Working Group on arbitrary detention concluded that such civil confinement “lacks due process…” and concluded “[t]his form of deprivation of liberty is gendered and discriminatory in its reach and application, as pregnancy, combined with the presumption of drug or other substance abuse, is the determining factor for involuntary treatment.”

65. Abortion bans also infringe upon the right to freedom of thought, conscience, and religion or belief, specifically the freedom to manifest religion or belief. Manifestation of religion or belief includes “worship, observance, practice and teaching.” As the mandate of the UN Special Rapporteur on freedom of religion or belief has outlined, the right involves “not only the “believing,” but also the “belonging” and the “behaving” in line with one’s religion or belief. This manifestation component of the right, also known as the forum externum, is not, however, unlimited. Article 18(3) of the ICCPR sets out the parameters of the State’s authority to limit the freedom to manifest a religion or belief, providing that the right “may be subject only to such limitations as are prescribed by law and are necessary to protect public safety, order, health, or morals or the fundamental rights and freedoms of others.” Governments can apply these limits to freedom of religion or belief only for those purposes for which they were prescribed and the limits must be directly related and proportionate to the specific need on which they are predicated. The HRC and the mandate of the UN Special Rapporteur on freedom of religion or belief have also clarified that restrictions may not be imposed for discriminatory purposes or applied in a discriminatory manner.

---

214 See supra ¶ 22-23 on “fetal personhood” approaches.
215 See supra ¶ 22.
217 See ICCPR, Art. 18.
220 The HRC is clear that the concept of “morals” derives from many social, philosophical and religious traditions; consequently, limitations on the freedom to manifest a religion or belief for the purpose of protecting morals must be based on principles not deriving exclusively from a single tradition. HRC, General Comment No. 22: Article 18 (Freedom of Thought, Conscience or Religion) (U.N. Doc. CCPR/C/GC/22) (30 July 1993), ¶ 8. In its general comment on freedom of expression which contains a similar limitation clause, the HRC reiterated this and outlined that interpretation of morality should comply with the conception of human rights as ‘universal’, with particular emphasis on the standard of non-discrimination. See also HRC, General Comment No. 34: Art. 19 (Freedoms of opinion and expression) (U.N. Doc. CCPR/C/GC/34) (12 Sept. 2011), ¶ 32; HRC, General Comment No. 37: Article 21 (Right of peaceful assembly) (U.N. Doc.CCPR/C/GC/37) (17 Sept. 2020), ¶ 46.
221 Id.
66. Restrictions on a rights-holder’s ability to behave in accordance with their religion or beliefs by providing abortion care do not conform to the limits set out in Article 18(3). First, these laws do not fall within the permitted exceptions because they are indeterminate. The HRC has explained that under the first criterion for limiting freedom of religion or belief, “law” must be “formulated with sufficient precision to enable an individual to regulate his or her conduct accordingly and it must be made accessible to the public.” 223 As described above, the myriad state laws that criminalize abortion provision and, in some states, “aiding or abetting” an abortion, are plagued by legal ambiguity. 224 As such, for the healthcare provider who is compelled to provide abortions because of their beliefs, the state’s efforts to limit their manifestation of their religion or belief is legally indeterminate, and therefore incompatible with Article 18(3).

67. Second, the state’s limit on the manifestation of freedom of religion or belief is not sanctioned by international human rights law because it does not serve a legitimate aim under international human rights law. Rather than serve safety, order, health, morals, or the fundamental rights and freedoms of others, the abundance of criminal abortion laws that restrict rights-holders’ freedom of religion or belief endanger people’s lives and violate numerous fundamental human rights. 225 Thirdly, even if such limits on the right could be said to pursue a legitimate aim under Article 18(3), (which, we argue, they cannot) the extreme punitive measures for providing care could not be construed as proportionate. The HRC has clarified that governmental restrictions on a right must be the least restrictive among all the adequate measures that could be applied. 226

68. Restricting access to abortion discriminates against women and girls, breaching the right to equality and freedom from discrimination on the basis of gender. 227 In its communications to the State party in Mellet v. Ireland and Whelan v. Ireland, the HRC outlined the gender discriminatory nature of abortion criminalization, noting that Ireland’s criminal abortion law subjected women “to a gender-based stereotype of the reproductive role of women primarily as mothers” and that “stereotyping [a woman] as a reproductive instrument subjected her to discrimination.” 228

69. The CEDAW Committee has explicitly recognized the gender-discriminatory nature of abortion restrictions: “It is discriminatory for a State party to refuse to provide legally for the performance of certain reproductive health services for women.” 229 Elaborating on the discriminatory nature of the restrictive legal landscape for abortion in Northern Ireland in 2018, the CEDAW Committee further found, “that the failure to combat stereotypes depicting

224 See supra Section I(B).
225 See supra Section I(B) on the human rights implications of criminal abortion laws in the US.
226 See supra note 219, ¶ 34 ( Outlining that the grounds for restriction “must be appropriate to achieve their protective function; they must be the least intrusive instrument amongst those which might achieve their protective function; they must be proportionate to the interest to be protected…The principle of proportionality has to be respected not only in the law that frames the restrictions but also by the administratative and judicial authorities in applying the law.”).
227 See ICCPR, Arts. 2-3, 26; ICERD, Arts. 2, 5; CEDAW, Art. 12.
228 See Mellet v. Ireland, ¶ 7.11, 3.19; Whelan v. Ireland, ¶ 7.12.
229 CEDAW Committee, General Recommendation No. 24: Article 12 of the Convention (Women and Health) (U.N. Doc. A/54/38/Rev.1) (1999), ¶ 11 (“It is discriminatory for a State party to refuse to provide legally for the performance of certain reproductive health services for women.”).
women primarily as mothers exacerbates discrimination against women and violates article 5, read with articles 1 and 2, of the Convention.\footnote{230} Similarly, the UN Working Group on discrimination against women and girls (WGDAW) has emphasized that “the right to safe termination of pregnancy is an equality right for women.”\footnote{231}

70. Restrictions on abortion can also violate the right to be free from racial discrimination. The CERD Committee has explicitly indicated that restrictions on abortion that disproportionately impact racial and ethnic minorities\footnote{232} run afoul of international obligations to eliminate racial discrimination.\footnote{233} In its 2022 review of the US, the CERD Committee expressed “deep[] concern[] at the Supreme Court’s ruling in \textit{Dobbs v. Jackson Women’s Health Organization}, of 24 June 2022, which overturned nearly 50 years of protection of women’s access to safe and legal abortion in the State party; at the consequent profound disparate impact on the sexual and reproductive health and rights of racial and ethnic minorities, in particular, those with low incomes; and at the disparate impact of legislation and other measures at the state level restricting access to safe and legal abortion or criminalizing abortion.”\footnote{234} The Committee recommended that the US “take all measures necessary…to provide safe, legal and effective access to abortion in accordance with the State party’s international human rights obligations.”\footnote{235}

71. Abortion restrictions can violate the right to be free from discrimination on the basis of socio-economic status or age as well. In \textit{Mellet v. Ireland}, the HRC found that “the differential treatment to which [the woman seeking an abortion] was subjected in relation to other similarly situated women failed to adequately take into account her medical needs and socio-economic circumstances and did not meet the requirements of reasonableness, objectivity and legitimacy of purpose.”\footnote{236} Accordingly, the HRC concluded that the failure of Ireland “to provide services to [the woman] that she required constituted discrimination and violated her rights under article 26 of the Covenant.”\footnote{237} Similarly, the WGDAW observes, “in countries where induced termination of pregnancy is restricted by law and/or otherwise unavailable, safe termination of pregnancy is a privilege of the rich, while women with limited resources have little choice but to resort to unsafe providers and practices.”\footnote{238}

\footnote{232}{See supra ¶¶ 33-37.}

\footnote{233}{See ICERD, Arts. 2, 5. See also CERD Committee, Concluding observations on the combined tenth to twelfth reports of the United States of America (U.N. Doc. CERD/C/USA/CO/10-12) (21 Sept. 2022), ¶¶ 35-36.}

\footnote{234}{CERD Committee, Concluding observations on the combined tenth to twelfth reports of the United States of America (U.N. Doc. CERD/C/USA/CO/10-12) (21 Sept. 2022), ¶ 35.}

\footnote{238}{Working Group on the issue of discrimination against women in law and in practice, Women’s Autonomy, Equality and Reproductive Health in International Human Rights: Between Recognition, Backlash and Regressive Trends (Oct. 2017), p. 2,}
Working Group observed that abortion restrictions do not decrease overall abortion rates, but only rates of safe abortions, and concluded: “This results in severe discrimination against economically disadvantaged women.”

72. The CRC Committee has highlighted the discrimination faced by youth seeking abortions, finding that “particular efforts need to be made to overcome barriers of stigma and fear experienced by, for example, adolescent girls, girls with disabilities and lesbian, gay, bisexual, transgender and intersex adolescents, in gaining access to such services.” The Committee also urged states to eliminate barriers, such as third-party consent or authorization requirements, that block adolescents and children from accessing abortion care, and recommended that states “decriminalize abortion to ensure that girls have access to safe abortion and post-abortion services, review legislation with a view to guaranteeing the best interests of pregnant adolescents and ensure that their views are always heard and respected in abortion-related decisions.”

73. Finally, some restrictions on abortion implicate the human rights obligations of private companies. Corporations have obligations to respect human rights, safeguard users’ rights to privacy, and ensure their services are not used in ways that cause or contribute to human rights violations. This includes adopting policies that protect users from unwarranted government surveillance and harassment.

74. Against this backdrop, it is no surprise that the Dobbs decision was greeted with international condemnation. Then-UN High Commissioner for Human Rights Michelle Bachelet Jeria described the decision as a “setback after five decades of protection for sexual and reproductive health and rights…” UN human rights experts representing diverse mandates concluded that Dobbs is “a shocking and dangerous rollback of human rights that will jeopardize women’s health and lives… [and it is] a monumental setback for the rule of law and for gender equality. With the stroke of a pen and without sound legal reasoning, the US

## V. ANNEX A:

### STATES WITH ABORTION BANS ENTERING INTO EFFECT AFTER DOBBS (AS OF 01/09/2023)

<table>
<thead>
<tr>
<th>State</th>
<th>Abortion Ban</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alabama</td>
<td>A ban prohibiting all abortions except in the case of a serious health risk to the mother has been in effect since June 24, 2022, after the US District Court lifted the injunction against it.</td>
</tr>
<tr>
<td>Arizona</td>
<td>The Arizona pre-Roe ban is temporarily enjoined, and the state has agreed temporarily not to enforce the law. A separate ban on abortion after 15 weeks of pregnancy has been in effect since September 2022.</td>
</tr>
<tr>
<td>Arkansas</td>
<td>The state’s trigger law, which is a full ban on abortion that contains no exceptions in the case of rape or incest, took effect after the state Attorney General’s certification of Dobbs on June 24, 2022.</td>
</tr>
<tr>
<td>Georgia</td>
<td>Abortion is banned after six weeks of pregnancy, after a court allowed a 2019 law to go into effect.</td>
</tr>
<tr>
<td>Idaho</td>
<td>Idaho passed a trigger ban in August 2020 which went into effect on August 25, 2022. However, on August 24, 2022, a federal court issued a preliminary injunction, applicable to part of the ban, deciding that Idaho cannot punish medical providers who perform abortions (or related care) on pregnant people in emergency situations (at least not until the lawsuit is resolved).</td>
</tr>
</tbody>
</table>

---

254 Idaho Code § 18-622(1)(a) (stating that the ban will take effect thirty days after “the issuance of the judgment…of the United States supreme court” which took place on July 28, 2022). The state Supreme Court declined to stay enforcement of this law, Planned Parenthood Great Northwest, Hawaii, Alaska, Indiana, Kentucky v. Idaho, No. 49615, 49817, 49899 (Idaho Sup. Ct., 12 Aug. 2022).
<table>
<thead>
<tr>
<th><strong>State</strong></th>
<th><strong>Abortion Ban</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Indiana</td>
<td>The state enacted a new law prohibiting abortion with very limited exceptions, which took effect on September 15, 2022. The law was enjoined on September 22, 2022 and is not currently in effect.</td>
</tr>
<tr>
<td>Iowa</td>
<td>In June 2022, the Iowa Supreme Court reversed itself and held that the right to abortion is not protected under the state’s constitution. A 2018 ban on abortion after six weeks has been permanently enjoined since 2019, but the Governor is seeking its enforcement.</td>
</tr>
<tr>
<td>Kentucky</td>
<td>Abortion is banned with no exceptions for rape or incest. In November, a ballot measure, asking voters to amend the State Constitution to state that it does not provide the right to abortion, was rejected.</td>
</tr>
<tr>
<td>Louisiana</td>
<td>A trigger law banning abortion without exception at all stages of pregnancy came into effect on June 24, 2022. The law was enjoined by a district court but the injunction was lifted on August 1, 2022. Thus, abortion is banned with no exceptions for rape or incest.</td>
</tr>
<tr>
<td>Michigan</td>
<td>The state’s pre-\textit{Roe} law banned nearly all abortions, but was overturned following a referendum in November 2022 enshrining abortion protections in the State Constitution.</td>
</tr>

<tr>
<th>State</th>
<th>Abortion Ban</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mississippi</td>
<td>A trigger law completely banning abortion with exceptions for life or rape, but not incest, became active on June 27, 2022.</td>
</tr>
<tr>
<td>Missouri</td>
<td>A trigger law fully banning abortion with no exception for rape or incest, has been in effect since the state Attorney General’s certification of Dobbs on June 24, 2022. It was the first state to certify the decision.</td>
</tr>
<tr>
<td>North Dakota</td>
<td>The state planned to begin enforcing its trigger ban to prohibit abortion entirely in late July 2022, however, the trigger ban is subject to an injunction and is not in effect.</td>
</tr>
<tr>
<td>Ohio</td>
<td>Ohio began enforcing a 6-week abortion ban on June 27, 2022 but it is not currently in effect, due to a preliminary injunction.</td>
</tr>
<tr>
<td>Oklahoma</td>
<td>After Dobbs, Oklahoma’s trigger law went into effect on June 24, 2022. It bans abortion in all instances at the point of fertilization with no exception for rape or incest.</td>
</tr>
<tr>
<td>South Carolina</td>
<td>The Supreme Court of South Carolina ruled that the state’s trigger law, which prohibited abortion after 6 weeks (except for medical emergencies or in cases of rape or incest when the fetus is fewer than 20 weeks) was unconstitutional.</td>
</tr>
</tbody>
</table>

268 Miss. Code § 41-41-45.

269 L. Deal, CONG. RSCH. SERV., LSB10779, STATE LAWS RESTRICTING OR PROHIBITING ABORTION 2 (2022).

275 Preterm Cleveland et. al. v. Yost et. al., No. A2203203 (Ct. C.P. Ohio, 7 Oct. 2022).

<table>
<thead>
<tr>
<th>State</th>
<th>Abortion Ban</th>
</tr>
</thead>
<tbody>
<tr>
<td>South Dakota</td>
<td>A trigger law with a complete ban on abortion has been in effect since June 24, 2022. 279</td>
</tr>
<tr>
<td>Tennessee</td>
<td>A trigger law completely banning abortion 280 went into effect on August 25, 2022.</td>
</tr>
<tr>
<td>Texas</td>
<td>A trigger law criminalizing abortion took effect on August 25, 2022. 281 The Texas Supreme Court held on July 1, 2022 that both criminal and civil enforcement of the law is permitted. 282</td>
</tr>
<tr>
<td>Utah</td>
<td>The state’s trigger law completely banning abortions came into effect on June 24, 2022 283 and was temporarily enjoined on June 27. 284 A separate law banning abortions past 18 weeks is still in effect 285 while the total ban is enjoined.</td>
</tr>
<tr>
<td>West Virginia</td>
<td>A state court granted a preliminary injunction against a pre-Roe criminal abortion ban on July 20, 2022, 286 but on September 13 the state enacted a total ban on abortion with exceptions for fetal viability, ectopic pregnancy, or medical emergency. 287 Survivors and victims of rape and incest can obtain an abortion up to eight weeks of gestation, but only if they report to law enforcement first. 288</td>
</tr>
<tr>
<td>Wisconsin</td>
<td>The state Attorney General and others are currently challenging an 1849 pre-Roe full ban on abortion with no exceptions for rape or incest. 289 Both the state’s Governor and Attorney General have vowed not to enforce this 173-year old ban, but clinics in the state are not providing abortion services since the</td>
